PressureGuard® APM²

PressureGuard® APM² with digital control unit

Digital Multi-function Control Unit

- Low Pressure indicator light and selectable audible alarm.
- Power Failure indicator light and selectable audible alarm.
- Simple, indexed comfort adjustment.
- Timed (20-minute) “Auto Firm” mode for transfers, ADLs, & CPR.
- “Float” mode provides powered flotation therapy.
- “Alternate” mode changes loading in 10-minute cycle; controlled at mattress for choice of lateral rotation or alternating pressure therapy.

Shear Transfer Zones® Cover Design (US Patent Number 8,438,682)

- Prevent heels, sacrum, and scapula from “digging into” surface.
- “Glide” user back to original position following HOB elevation.
- Protect against damaging effects of micro shear, macro shear, and rotational (pivot-induced) shear.
- Provide patient stability by transferring shear to more shear-tolerant anchor points.

QUICK FACTS

Indications:
- Treatment of Stage 1–4 pressure injuries
- Patients that can’t/won’t reposition frequently
- Can be positioned off pressure injury in at least two positions¹
- Prevention for high risk patients

Therapy Provided
- Powered Pressure Redistribution
- Alternating Pressure
- Lateral Rotation

The APM² has been an industry-leading air therapy solution for more than a decade, based in large part on its documented superiority vs. typical, roll-up treatment surfaces. Newly upgraded cover design and control unit provide even greater immersion, envelopment, shear reduction, treatment flexibility, caregiver ergonomics and user comfort.

¹ In situations where positioning on the pressure ulcer cannot be avoided (e.g., the individual has multiple ulcers on multiple surfaces), limit the amount of time the individual is positioned on the ulcer. Source: NPAUP/EPUAP Pressure Ulcer Prevention and Treatment, Clinical Practice Guideline, p 66-67

Now made with LifeSPAN® bleach-resistant fabric cover (see page 15 for details)
